

Minimizer System™

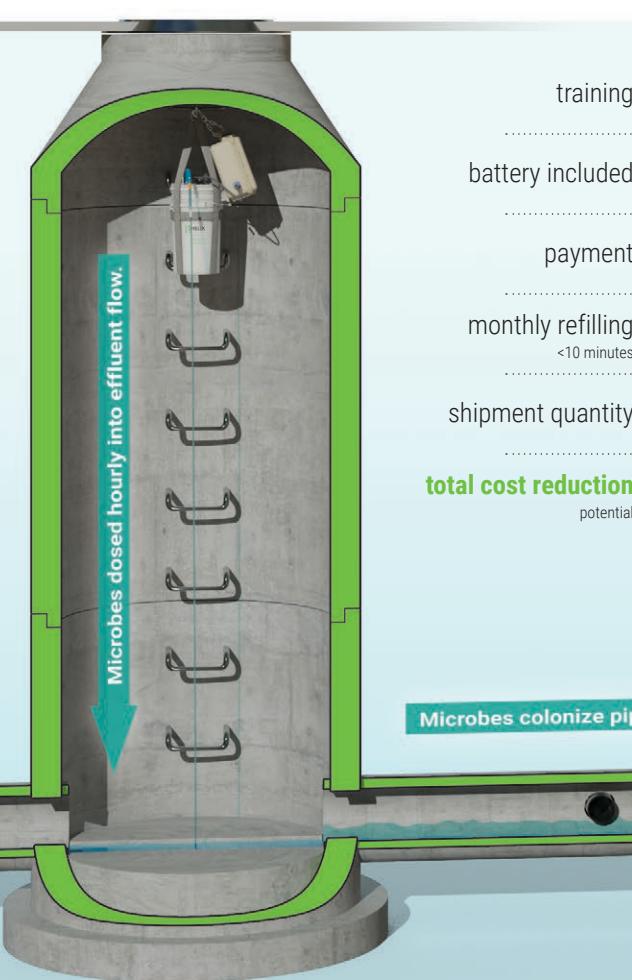

Automatic Control for Sewer Grease

Prevent SSOs Protect Your Crews Save Resources

The patent-pending Minimizer System™ automatically doses Minimizer LIQ™ grease-devouring microbes into your toughest sewer lines, preventing grease accumulation.

This preventative approach saves the resources jetting consumes: truck hours, fuel, labor, water, and traffic control. Also, it offers downstream benefits by clearing grease, preventing its reattachment, and reducing treatment burden. Most importantly, it lowers risk associated with SSOs and traffic exposure.

Getting started with Minimizer System™ is easy and risk-free—if you don't love it, simply cancel and return any unused pails for a refund.
